

Mateusz Grzejszczyk

React Developer

I have been intensively learning frontend technologies for over 1.5 years. Hard work allowed me to fulfill my dream. In the middle of 2021, I started my professional programming journey and became a React Developer. I have also finished postgraduate studies in „Frontend Development with React”. Curiosity and willingness to develop has turned into passion and everyday development to become a better, more skilled Frontend Developer. I follow the IT world with interest. I do online courses and create my own projects. My Industrial Automation background gave me self confidence, knowledge about advanced technological industrial projects and some helpful business skills. Please see my webpage and my projects on the Github platform.

Date of birth: 10.04.1992

Phone number: 500 239 053

Warsaw, Poland

Education

	Kozminski University Frontend Development with React (Postgraduate studies) Study program: HTML, CSS3, JS, React, Node.js, React Native	2020 - 2021
	Warsaw University of Technology Mechatronics (Master of Engineering) Diploma: Automatic navigation in building during fire. Simulation created using C++	2015 - 2017
	Warsaw University of Technology Mechatronics (Engineer)	2011 - 2015

Courses

React Courses

Online courses on eduweb.pl

120 h of studying (React, React router , Redux, Hooks, Render props etc.)

freeCodeCamp Courses

Online course on [freeCodeCamp.org](https://www.freecodecamp.org).

100 h of studying (HTML5, CSS3, JSES6+)

Work Experience

	React Developer Accenture July 2021 - currently	Main tasks: everyday frontend tasks, writing tests, agile team meetings, cooperation with customers, technical discussions, working on solutions
	Control System Specialist Yokogawa September 2017 - 2021	Main tasks: supervision over the team, algorithms and technical documentation analysis, creating and designing DCS control systems, cooperation with customers, preparing technical and commercial offers for systems.
	Software Developer AVL June 2017 - September 2017	Main tasks: development of software in Automotive Industry (PLC software), fixing issues in logic.
	Automation Specialist ProAutomation September 2016 - March 2017	Main tasks: supervision over the control system installation in greenfield plant, PLC software testing, hardware testing, hardware installation.

Technician

Industrial Research Institute for
Automation

December 2013 - March 2016

Main tasks: development of a plasma burner control algorithm, creating software, design hardware, assist in plasma burner commissioning.
